

Monitoreal Announces New Video Recording Feature

Monitoreal, a global provider of intelligent home security surveillance systems, has launched new video recording capabilities for its Base and Pro device models.

The feature allows users to isolate video of security events captured by their perimeter cameras, without having to playback hours of footage via NVR.

Users can therefore leverage their Monitoreal device as a smart search engine for the incidents they want to investigate, and play a full video of the event in question with the click of a button.

The feature requires connection with Monitoreal Drive, a hardware add-on to the brand's Base and Pro security assistant units.

The Monitoreal video recording feature is part of the v1.4.0 software update, and requires connection with the Monitoreal Drive product add-on. Learn more about Monitoreal updates [here](#).

About Monitoreal

[Monitoreal](#) is a global provider of intelligent home security surveillance systems.

Monitor your surroundings in real-time with our AI-based smart object detection. Receive customizable alerts when people, cars, and objects move in the areas that matter most. Prevent intruders by triggering smart audio and light accessories, using rules that protect your home no matter where you are.

Turn your existing or new security cameras into powerful surveillance with Monitoreal, even if they're low-resolution, under poor lighting, or are placed at a distance.

Founded in 2018, Monitoreal is a privately owned company headquartered in Cyprus, Europe, and operates globally. Our devices are designed and assembled in the EU.

Monitoreal. See What Matters.
