

Smarter Workflow Solutions for the Double Glazing Industry

In the highly competitive double-glazing industry, managing workload efficiently and delivering outstanding customer care are essential for success. A company's reputation hinges not only on quality craftsmanship but also on having the right systems and processes in place.

For many businesses, manual T Card Planning Boards have been a go-to method for tracking job status, orders, and installation planning. These tools are simple, visual, and easy to manage. However, while they still have a role in many work environments, today's demands often require more flexible, digital solutions that can offer additional benefits.

A Digital Upgrade for a Growing Business

One company that made this transition is Swift Windows. Specialists in manufacturing and supplying windows and doors for over 30 years, they adopted T Cards Online in 2019 to help manage increased workload and maintain profitability.

"We were pleased with the manual setup, but when we looked at T Cards Online, we immediately saw the benefits of planning and allocating tasks from multiple devices. We wanted a simple solution; efficiency quickly increased and job tracking improved, allowing us to provide better customer service and meet key deadlines. Nothing gets overlooked. The support from T Cards Online is fantastic."

Owner, Sean Catterall

Customisable for Your Business Needs

T Cards Online can be tailored to your business requirements, with ongoing improvements that keep the system moving forward. T Cards Online regularly introduces new features based on client feedback, with many enhancements inspired by ideas from users like Swift Windows. This ongoing progress ensures the system continues to meet the changing needs of businesses in the industry.

Key Features and Benefits

- Multi-device access: Use T Cards Online from large monitors, desktops, and mobile devices.
- Real-time visibility: Get instant information across departments.
- Third-party integration: Connect with other systems using the API or tools like Zapier.
- Automated workflows: Streamline tasks, reduce manual input, and increase productivity.
