## Airco Switch

Stay cool or warm at lower cost!

The **Ecosoft Airco Switch** can control almost any airconditioner by simply copying the infrared remote control. The internal software of the Airco Switch downloads the current energy prices, so it can control the airco to save energy by using it efficiently when prices are low:

The **Airco Switch** is very easy to setup. With a range of around 13 meters (14 yards) it can be positioned almost anywhere. The software already has multiple airco brands built-in, but if your model is not in the software yet, the Airco Switch can learn the commands from the remote control.

**Ecosoft : Smart devices for smart energy use**

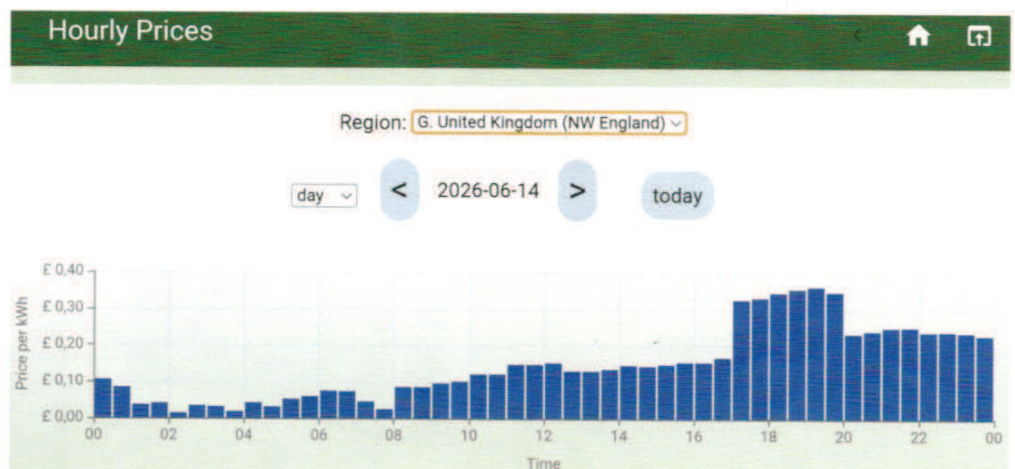

# Ecosoft Energy

The **Ecosoft Airco Switch** can control almost any airconditioner by simply copying the remote infrared control. The internal software of the Airco Switch downloads the current energy prices, so it can control the airco to save energy by using it efficiently when prices are low.

With a **dynamic energy contract** the Airco Switch can pre-heat or pre-cool your house making use of the lower electricity prices.

## Using the Airco Switch as a hybrid solution:

Because the Airco Switch can also download gas prices and knows the COP of the airco, it can determine when it is cheaper to heat with the airco or with a gas heater. When the air conditioner is switched off the gas heater will automatically take over because the thermostat will detect a temperature drop. This creates a hybrid solution that uses your energy efficiently.

The Airco Switch can be used by itself, but it can also be controlled by, or combined with, the **Smart-Grid Hub**. This unit can control Heat pumps, solar inverters and more, to optimise the energy use in the house even further.
