Navigation is central to driving. We designed the Navigation app from the ground up to get first responders swiftly and safely to the scene. With real-time maps and a user-friendly design, it shortens response times and improves traffic safety for first responders globally.

Shows the way

Knows where you are going. Automatically sets your destination address based on the dispatch.

Live traffic and accurate routes

Avoid congestions and arrive faster through use of live traffic data collected from multiple sources.

Multiple map layers

View the map in 2D, 3D, satellite view or a combination of two. Gives you optimal situational awareness.

Features

Designed for emergency driving. Optimized user interface tailored for safe emergency driving.

Live updating map. Immediately knows about road changes or road works. Found a problem in the map? Let us know and your map is updated within 24h.

Avoid low bridges. Set the height of the vehicle and remove the risk of passing a bridge that is too low.

Gates and barriers. Utilize geo-fences to open doors, gates, and barriers.

Add a control point. Automatically from dispatch or manually. Add a control point to your route.

Clear overview. Through the press of a button a clear overview of your route is presented.

Clear maps. Highlights the building you're going to. Helps you find the right door directly. Zoom in and pan though simple finger gestures.

Offline coverage. Areas of no connectivity. No problem. The maps you need are always available offline.
