

A user-oriented technology company, redefining the way first responders operate by harnessing innovation.

We are determined to improve the society we live in by redefining the way first responders operate. We have a passion to help those who help others.

Over time, emergency vehicles have fallen after the huge development in the civil automotive industry. Being a part of the growing Swedish technology-scene, we harness innovation to constantly question industry standards, ways of working and old choices.

The past is a steppingstone, not a milestone. We have no legacy. We are free to change. We are open and invite others to join us in our quest. At EVAM, we let our passion guide us.

Founded 2015

Spun-off from the Royal Institute of Technology, our journey began with launching Evam Transmit, a revolutionary V2V communication system, awarded one of the most disruptive and useful innovations of the 21st century. We have now launched the first ever operating system for emergency vehicles. Explore the Evam Platform at www.evam.life.

Designed and developed in Sweden

From the smallest building block, Evam products are designed and developed in Sweden. Visit us at our headquarters in Stockholm.
