

PAROTEC

WELCOME TO PAROTEC SOLUTIONS

For over 25 years Parotec have been designing and manufacturing case and foam solutions. With a passion for creating the very best enclosures for the protection and appealing presentation of our customers products, our strive for perfection is never ending.

Our unparalleled design is backed up in strong relationships with the very best suppliers, ensuring we can provide the correct solution and guarantee our customers' satisfaction.

Based just outside Manchester, we supply a diverse range of companies in both the UK and across the world. Some of our blue-chip customers include: Apple, GE, BAE & Airbus.

One thing though is for certain, whether it's a one-off solution or many thousands, our quality and dedication never change. Why not contact us to see how we can help you today?

CONSULTATION

THE BEST SOLUTION

Whatever your needs, Parotec provides a full service to our customers from consultation through to design and manufacture.

Our experienced sales staff work alongside customers to gain knowledge of their exact requirements, recommending the correct solution based on the brief given.

If a case is needed for your product, Parotec will select the most appropriate one for you from our range of top quality cases supplied from the most respected manufacturers. So whether you are looking to present your products neatly for demonstration or sale, or are looking for military grade protection during transportation, we will be sure to find the correct case for you.

FOAM DESIGN

BESPOKE

If your product requires a foam inlay, our design team will arrange your products in the most presentable and efficient way to help you maximise the utilised space before sending you a drawing to approve.

Our state of the art Foam Design System allows customers to photograph the majority of items themselves using a custom scan sheet, without the need to send them to Parotec for scanning. These images can then be imported by our design team, and the contours of the objects will automatically be detected by the system.

This then goes on to produce an image of the foam which we can send to customers for approval.

We have a wide range of foams available to us from our suppliers to ensure we always supply the very best to our customers.

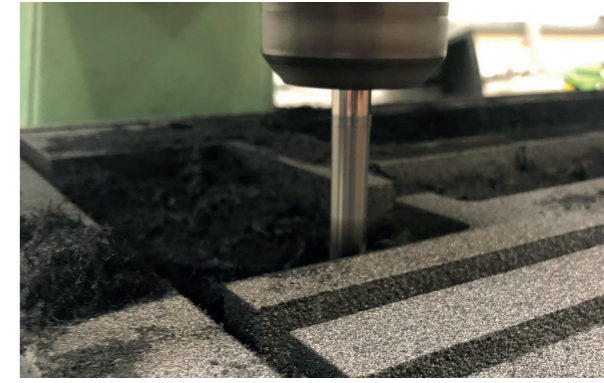

MANUFACTURING

CUTTING EDGE TECHNOLOGY

At Parotec we use sophisticated CNC routing machinery to cut the different grades of foam. Capable of cutting the most complex of product shapes, our CNC machines can deliver precision and repeatability, as well as speed of production and cost effectiveness.

Utilising the latest CNC technology, our large machines enable us to route multiple units. Also, due to the elimination of tooling costs, the process can create one-off routed foam inserts as effectively.

Based on the foam that is being created, we can also offer water jet and die cutting to guarantee we always offer the most cost effective and appropriate solution to our customers.

CASES

PROTECTION AND DURABILITY

Working with the largest and most respected brands allows us to offer a wide variety of solutions covering a broad aspect of usage.

From the smallest presentation case, to the largest waterproof heavy duty protective case we have the right product for your needs, and a lot more in between!

Why not contact Parotec to discuss your specific requirements and allow us to suggest the best solution for you?

ADDITIONAL SERVICES

TO COMPLIMENT AND ENHANCE

Laser Services - Engraving and Cutting

Parotec can take your designs, CAD files and drawings and turn them into reality, using our top of the range laser facilities. We can cut acrylic, plywood, MDF, fabrics, rubber plus many more materials and can engrave an array of materials.

Screen Printing

We can also apply your brand, logos or information on to a range of cases using screen printing. The ink is applied directly to the surface, leaving a high quality finish that looks professional.

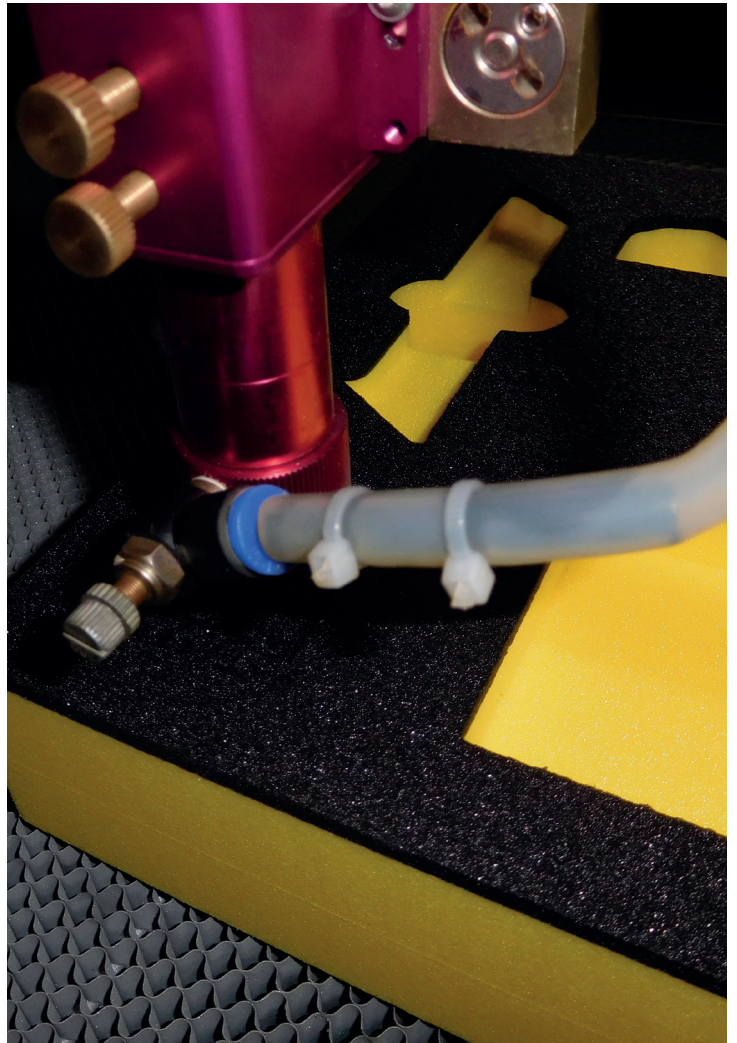

In-Mould Labelling (IML) - WAG Cases Only

In-Mould Labelling (IML) - the communication of your advertising and brand message in photographic quality totally according to your requirements. This label is applied to the case during production and so forms part of the case, leaving a clear and crisp finish every time.

NFR & GPS Technology

Recent leaps forward in technology now also allow the use of NFR technology to scan a case using a smartphone or tablet and find details about the contents. GPS tracking is also becoming more widely available with some of our brands meaning that the journey a case and its contents has been on can be tracked closely along with a range of other user-defined information.

Contact us for more details on these services.

FINDING THE RIGHT SOLUTION

At Parotec our sales team is always on hand to answer any questions you have to help you find the right solution for your needs. If you are unsure what you need, call or email us and we will guide you to the best product for you.
