

— Device managed services

With more than 20 years' experience, we help clients to manage and protect their mission-critical devices, freeing them up to focus on their core business.

We currently manage more than 150,000 technological assets, including personal radio handsets, vehicle radios, body-worn video cameras, mobile phones and tablets.

Our marketing-leading services are underpinned by a UK-based 24x7 ISO-accredited service desk, a nationwide network of service hubs and a team of mobile field service engineers. So local support is never far away.

All of our employees are cleared to SC so we're ideally placed to support your large, complex and secure asset management requirements.

Whether you are a government agency, emergency service or commercial entity, SSS Public Safety can provide the right solution for you.
