

# N•ear

## Replacing the acoustic tube

The N•ear 360™ is the most covert and comfortable earpiece on the market. The unique patented design bends the wire close to the head to give a discreet, comfortable and secure fit.

The N•ear 360™ has proven to be an essential tool in critical communication since introduction in 2018 and now is trusted by users around the world.

Three variants for the N-ear earpiece are available to meet different price-points.

The N-ear offers perfect sound quality coupled with a patented bend over the top of the ear which provides a perfect fit and prevents the earpiece from falling out of the ear.

The design of the N-ear reduces ear fatigue while retaining full situational awareness, which acoustic tubes do not.

The N-ear can be used with existing audio systems, requiring an adapter block to convert the current acoustic tube to N-ear. Alternatively, N-ear offers a range of PTTs to suit different requirements.

### KEY FEATURES

- **Optimum comfort with no ear fatigue** Designed to wear all day
- **Discreteness** Almost invisible design
