Tech to make your business

BOOM

TripStax

So, what are we all about?
### Tech to make your business BOOM

TripStax is a fully connected stack of tech modules designed for travel management companies to service their corporate clients. Powered by The Core, a profound central data processing architecture, all booking, profile and invoice data across the entire eco-system is ingested, cleaned, enriched and managed.

Clients can plug-in one, two or all of TripStax's ten cutting-edge tech modules, or any third party solution. TripStax is built on a ground-breaking, cost reducing commercial model for its customers.

The TripStax vision is to redefine the technology landscape and economics for travel management companies globally by giving them access to premium, proven and affordable technology solutions.

TripStax was founded in 2021; however, the technology underpinning The Core and the modules has a 25-year pedigree of development, innovation and investment.

We unpicked a 60-year old ecosystem, and proudly reinvented it.

INGEST → **CLEANSE** → **ENRICH** → **MANAGE**

Why adopt our tech?
Get access to state-of-the-art, proven and affordable technology

Become more competitive & generate new revenue
Supercharge the growth of your business by offering your clients market-leading, cloud-based technology. You can create premium packages to drive additional revenue and boost your sales propositions by selling additional functionality and software.
1.

Implement without disrupting BAU operations
We work alongside your team to get everything up and running in the background. This means the switchover is seamless and you won't experience any disruption or operational downtime.
2.

Make significant cost savings
You'll no longer have to pay multiple and costly transaction fees. Only ever pay once; no matter how many TripStax modules you have or how many times a booking is processed.
3.

Simplify tech integrations
We plug-in existing third party infrastructures directly into The Core. Not only does this centralise and simplify your set-up, but it also cleans and enriches your data. Easily add any of our cutting-edge tech modules to enhance your tech portfolio and reduce the need to manage multiple suppliers.
4.

One single point of truth for all your data
All your data will be centralised, cleansed and normalised regardless of the source or format. This means you'll be able to trust the data you see and with it, make the right informed decisions.
5.

The ultimate ecosystem

Inbound data acquisition
- Finance data
- Profile data
- Booking data
- Third party data

Content

Third party platforms

The TripStax Core is the ultimate innovative data warehousing solution. It's the beating heart of our entire ecosystem. The Core ingests and centralises all booking, profile, finance and third party data, no matter the source or format. It seamlessly connects to multi-channel content APIs pulling in data from GDSs, hotels, as well as, NDC and LCC channels.

The Core cleanses, normalises, enriches and stores it in one place, giving you one single point of truth for all your data and insights.

And, it doesn't stop there. The Core has an extensive array of features which go way beyond the data source, taking your data capabilities to the next level and vastly improving your user experience.

It cleverly powers all of the TripStax modules too.

The Core is powerful. It's dynamic.
And, there's nothing else like it out there

Plug in cutting-edge, proven tech modules

Portal acts as the gateway to all the modules. It provides access based on the user's needs and rights to information such as bookings and duty of care. Third parties can be integrated to give corporate users a complete travel environment from one place, with one login.

Portal

Content is a set of APIs enabling the consumption of GDS and non-GDS airline content, including NDC and LCC direct connections and aggregators. Simplify your air content connectivity and have a single point of access to an unparalleled breath of content.

Content

Approve allows businesses to authorise travel no matter where in the world teams are based. Build automated workflows that cater for complex, granular travel policies. Set budget limits to control expenses and view travel reports.

Approve

Analytics is exceptional AI technology with natural language interaction capabilities which provides behavioral and financial analytics in real time. The highly sophisticated and comprehensive suite of tools enables users to interact with travel data from the most aggregated to the most detailed level.

Analytics

QC is our logic engine which ensures bookings meet quality control criteria, client requirements and service levels or agency operational standards. It removes the QC process from the GDS-centric PNR and instead centralises it outside of the GDS in an API-connected environment.

QC

Docs is a document production system automating the creation and delivery of travel related papers such as travel options, quotes, itineraries, e-ticket receipts, invoices and much more – all done irrespective of the booking source.

Docs

Track is a powerful traveller tracking and end-to-end duty of care solution developed to ensure travellers can be located and communicated with 24/7. It includes up-to-date risk and Covid-19 metrics to give you and your corporate customers solid insight into the risk profiles of destinations.

Track

Profile is a traveller and profiling solution which integrates into a plethora of third party profile and HR systems, made easy by its API and webservice capabilities. It tracks and stores contact and payment details, and all other travel-related information and documents in a GDPR compliant system.
Profile

Mobile is the perfect travel companion app containing all the information a traveller needs. Important documents such as itineraries, passport and visa details are easily accessible. Consolidate itineraries from multiple sources and integrate traveller profile data for on-the-go, real-time updates.

Mobile

Hotels provides multi-source accommodation content via the TripStax ecosystem. Gain access to more than one million hotels, search for properties, make reservations and take advantage of a wide range of features and benefits – all in a single interface.
