

Travel risk
intelligence you can trust

We've got
you covered

Communications are cut after a coup d'état. Airports are closed after a hurricane's landfall. Hospitals are overwhelmed during an outbreak of disease. But life-threatening situations don't materialise out of nowhere. Riskline tracks potential threats as they develop and keeps you informed before it's too late.

Riskline analysts monitor, verify and then synthesize over 100,000 open sources to make accurate and timely assessments of travel and public safety risks. Our team's geographic distribution, located in over 15 countries and across 11 time zones, means that we are able to provide this human verified risk intelligence 24/7/365.

Be prepared

We have everything you need to learn about a destination before you go. From the long-term threat of terrorism to the local risk of a protest taking place right now, our reports will have you covered.

In the know

Stay on top of what's happening locally with real-time Alert Messaging, our system to inform you about unfolding crises and issues that could impact your safety or travel plans as they happen.

Stay on track

In addition to keeping you safe, Riskline also helps you stick to your travel plans. We report on travel disruptions caused by everything from natural disasters to labour strikes.

Easy to understand

We don't believe in complicated scoring or convoluted systems. Every report we publish includes a Risk Level, our simple scale of risk from Low, level 1; to Extreme, level 5.

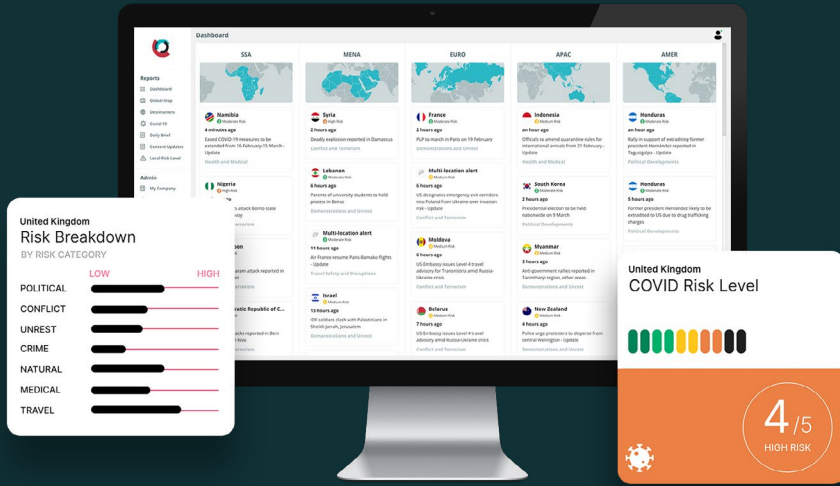

Specific needs

Not everyone has the same needs when travelling, so Riskline provides assessments and advice specifically for female, LGBT+ and tech-dependent travellers.

Decades of experience

Riskline was founded in 2007 in Copenhagen, Denmark, with a goal of caring for travellers through technical innovation and human verification of risk intelligence. Today, our services are used by millions of travellers every year and trusted by global travel management companies, small businesses and everyone in between.

Riskline provides human-verified risk intelligence that keeps travellers informed and safe

Alert Messaging

Riskline's Alert Messaging operates all day, every day. Every alert contains essential information, practical advice and precise geographic information about risks to traveller safety or impacts on travel plans.

Travel Advisories

Riskline's Travel Advisories are detailed assessments of ongoing security situations and travel issues. We publish reports for high-risk geographic areas, political and security crises, persisting travel disruptions and major upcoming events, such as elections and international sporting competitions.

Risk Assessments

Riskline has detailed Risk Assessments for more than 220 countries and territories around the world. Each report has a summary which can be used in business operations.

City Safety Report

Riskline assesses the safety of more than 250 global cities, assigning each a clear Risk Level. In addition to city-specific threats and other local information, every report has a map of important locations down to street level.

Pre-Travel Advisories

Riskline's Pre-Travel Advisories (PTAs) contain what a traveller needs to know about their destination before they leave home. Each report is a concise summary of the security and travel safety situation for any destination.

Some travellers have specific concerns that may not apply to everyone. Riskline's Specific Traveller Advice has information and advice on technology, local culture, LGBT+ acceptance, female traveller safety and other particular safety issues.

COVID-19 Restriction Intelligence

Riskline has closely tracked developments associated with COVID-19 since day one, communicating real-time intelligence about the pandemic to travellers via Alert messages, a dedicated COVID-19 microsite and public maps. Our COVID-19 information ranges from the city to the national level.

Portal

Travel and security managers can use the Riskline Portal to access all services and reports in one place. Each portal includes a global risk map, an alerts dashboard for use in operations centres and our dedicated COVID-19 microsite.

APIs

Everything we do is available through APIs. We push new and updated reports to you as they happen, so you have the latest information in your system.

Widget

The Riskline widget can easily be embedded onto a website or platform with a few lines of code. Navigation is user-friendly, delivering all the vital travel risk information needed in a concise format.
