# Metal Lamination Case Study

Constructed in 1983, this commercial building in the coastal city of Yokohama, Japan has kept its pristine aesthetics thanks to the use of matte white Tedlar® PVF film, helping to protect the façade of the building from the elements, dirt and corrosion.

Compared to the Tedlar® standard color chart, the exterior cladding of the tower displays hardly any difference in color after 34 years, testament to the outstanding durability of Tedlar® films, even in delicate colors, decade after decade. Manufacturer partner: Nippon Steel

**Area of Application:** Building & Construction

**Year of Construction:** 1983

**Location:** Yokohama, Japan
