

Bringing the best of tech to construction

Across our unified web portal and native mobile apps, we're working to make construction safer, easier, and more efficient for everyone.

Access Control

Because jobsite data is centralized in Odin, a worker only needs to be credentialed once to gain jobsite access. Workers can then clock in using any mix of physical access controls approved for the jobsite. Odin also offers customizable geo-fenced clock-in functionality via our worker mobile application.

Worker Onboarding

Odin collects the necessary documentation to get workers on site quickly and easily, ensuring they can focus on work, not paperwork. All worker information can be retrieved with the push of a button, including credentials, documents, health records, and access history.

Automated Compliance

Using data collected across the platform, Odin can automatically generate reports that currently require tedious manual labor by both on-site and business teams. Our reports can be customized based on state, local, or internal requirements.

Data-Driven Insights

Our mission is to keep workers safe using the data generated by the jobsite. We consolidate and analyze this valuable resource to identify trends and issues in real time, minimizing risk and improving safety for everyone on site.
