ADVANCE2000

THE CLOUD DESIGNED FOR YOUR FIRM

From consulting to implementation, our cloud is designed specifically for the AEC industry by providing the highest performing workstations on the market today.

Built for architectural, engineering and construction professionals to deliver a smooth, seamless, high performance experience without compromising on real-time collaboration for all team members- regardless of their location.

PRIVATE CLOUD

We own and operate our data centers. When partnering with us, your cloud is dedicated solely to your firm and your resources are never shared with other firms.

ENGINEERING SOFTWARE

Our VDIs are software agnostic and designed specifically for the AEC industry. We support any software program available, including the most resource demanding BIM and rendering applications on the market today. Our advanced VDIs are capable of running multiple programs simultaneously from the same desktop.

SECURED DATA

Security is not something to be taken lightly and is very much an on-going battle. Small and medium sized businesses have exactly the same data protection needs as large companies but with much smaller budgets. Our staff and Private Data Centers provide the economies of scale and best-in-class security for ALL businesses— whether large or small.

WHY

ADVANCE2000?

"Advance2000 has focused on creating managed and secure private cloud infrastructures for the Architectural, Engineering and Construction professions for over a decade. Our very unique offering delivers a seamless collaboration experience to your entire team regardless of location. With unparalleled virtual desktop performance and security provided on the device of your choosing."
