

With a project as vital as yours, we're building more than temporary structures. We're building success.

With a robust line of products that can meet a wide range of end use applications and engineering needs, the ISS team is ready to find a solution for your upcoming project.

Our team brings decades of experience, along with an unwavering commitment to safety and service. Specializing in large-scale, high-volume, and urgent projects, Industrial Structure Solutions is more than a tent vendor.

Let us be your trusted temporary structure partner.

Industries Served

- Logistics, Transportation, & Warehousing
- Disaster Relief & Emergency Response
- Construction
- Medical & Emergency Response
- Oil & Gas
- Aviation & Aerospace
- Commercial & Industrial Businesses
- Big Box, Chain Locations, and More

Services Provided

- Preliminary on-site services to consult on project details and obtain specs.
- Design & Engineering services to visualize or customize your project.
- Project Management services to ensure ground team is organized and project requirements are met.
- Delivery & installation services to execute jobs for our national clientele.

Temporary ISS Solutions

- Modular systems with widths ranging from 3m (10') - 60m (196')
- Unlimited length options, typically in increments of 5m (16')
- Leg heights ranging from 3m (10') - 8m (26')
- Standard double/single doors, as well as man/garage doors available
- Engineered to handle high wind tolerances, up to 150mph+
- Options for snow loaded structures and site-specific engineering
- Options for interior climate control in warm/cold weather climates
- Options for vinyl, insulated, glass, or PVC sidewalls

Industries Served

Commercial & Industrial Businesses, Big Box Stores,
Chain Locations, and More

Logistics, Transportation & Warehousing

Ramp and loading dock covers, temporary awnings,
storage structures, temporary warehouses.

Disaster Relief & Emergency Response

High-volume shelters, temporary medical facilities,
natural disaster response.

Construction

Long-term weather protection on concrete projects,
temporary offices and break rooms for large sites.

Medical & Emergency Response

Testing drive lanes, turnkey hospital space, additional
triage, vaccine administration/check.

Oil & Gas

Temporary structures for man camps, lunch/catering
tents, worker break rooms, living quarters.

Aviation & Aerospace

Temporary airport hangars, maintenance facilities,
sunshades, terminals, large-scale storage.

Site Consultation

Our team is ready to meet yours and get eyes on the project location. Site consultations give us the opportunity to take essential measurements and help get ahead of potential surprises. They allow us to see how the surrounding environment relates to the project and take reference photos, which help in developing the ideal structure solution.

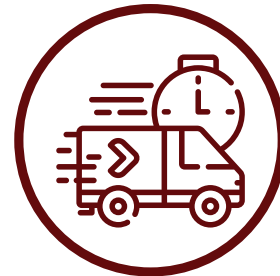

Design & Engineering

Our in-house CAD drafters can help in visualizing and even customizing your structure project, with no limits to customization options. The tools we provide include site plans, elevations, and diagrams that help in understanding unique features. These tools not only help visualize but are essential for most permit applications.

Project Management

Our PM's take ownership of each project to ensure it runs efficiently and effectively. They act as a liaison between clients and staff to maintain communication, to keep to timelines, and to be responsive to changes. They assist greatly in the planning stages, but it is their on-site presence on large scale projects that is paramount.

Delivery & Installation

Our site crews and team leads bring years of experience and technical knowledge to every install. Safety is vital, as well as accuracy in carrying out the build as planned. Our team is trained/certified in the use of installation machinery, and we can accommodate unique work hours when needed as to not interfere with a client's operations.

Structure Solutions

Structure Features & Options

From helping you develop a custom shelter solution to 36-hour rapid installation, whatever you need, wherever you are, ISS has you covered.

- All structures allowing for unobstructed internal spaces
- Widths ranging from 3m (10)-60m (196)
- Leg heights ranging from 3m (10)-8m (26')
- Unlimited lengths, typically in increments of 2.5m & 5m
- Engineered for high wind tolerances, up to 150mph+
- Options for increased snow loaded structures
- Site-specific engineering
- Standard double/single doors available
- Garage doors available in various sizes
- Vinyl, insulated, glass, and/or PVC sidewalls
- Various subfloor options include both on-grade & level floor systems
- Various floor coverings available
- Options for HVAC, thermostats/climate control, and air circulation/filtration systems
- Generator and power distribution available
- Various stocked lighting and fire safety products
- Flame-retardant vinyl materials
