# Multiple Construction Operations Solutions, One Price

Autodesk Build, Pype AutoSpecs, Closeout, eBinder, and SmartPlans

Leveraging our Common Data Environment to manage and collaborate on sheets, models and construction documentation, Autodesk Build supports transparent decision making by connecting issues and RFI's to project cost and schedule commitments while fortifying your safety and quality processes through an intuitive mobile interface. When Pype's powerful automation is used to bookend Autodesk Build's workflows, project teams can further reduce human error, improve communication, and maintain contract compliance.

Extract submittals and other project requirements automatically from specs and drawings before sending your submittal log to Autodesk Build to track and manage overall project progress. As the project winds down, project teams can lean on automated closeout document collection to keep everything on schedule and contract compliant before automatically compiling closeout documents into a sleek, digital turnover package for a memorable final touch point for clients.
