Assess and Advise Service: Autodesk Construction Cloud

Are you getting the most out of your Autodesk Construction Cloud software?

Companies invest in Autodesk Construction Cloud (ACC) to connect critical workflows and collaborate securely from a single source of truth. However, many companies are not utilizing ACC to its full potential.

IMAGINiT's Assess and Advise service offering for the Autodesk Construction Cloud, is designed to ensure your team is optimizing usage for all the toolsets available in the software and applying industry best practices for further enhanced workflows. IMAGINiT will review the current state of your ACC Hub, existing projects and account settings and will provide a detailed report with recommendations and findings.

Through the Assess and Advise service, an IMAGINiT Technical Expert will review the current state of your ACC Hub by reviewing existing projects and account settings.

Who Can Benefit from the Assess and Advise Solution?

1. Customers that have been using Autodesk BIM 360 and are looking to improve their configuration/process before migrating to ACC. These customers can be long time adopters.

2. Customers that are in their first year of using Autodesk Build and are struggling in some areas and need assistance

    a. They may have gone through a trial but did not have IMAGINiT services

    b. They may have had general education but are struggling with project-related issues

What to Expect:

1. **Project Kickoff**

   We will hold a meeting with you for introductions to the IMAGINiT Team (Project Manager and Consultant), to review the Scope of Work to set expectations, and confirm the schedule. We will need to also work with you to provide IMAGINiT access to your ACC project(s) for review.

2. **Off-site Analysis**

   IMAGINiT will spend some time reviewing your project(s)—getting familiar with the active modules within your project(s) and gaining an understanding of how Build is being used. During this time, interaction with you may be requested but not required.

3. Discovery

After the initial analysis, we will meet with you to review your project(s). The IMAGINiT Consultant will gather feedback to understand how you are currently utilizing the different modules in Build, with a combination of how you are using Build and your project requirements determining the team that we will be meeting with. This discovery would start with an overview of data exchange and the handover process with a focus on Autodesk Docs (models if available, PDFs, and other supporting files) and how sheets are being published to Build.

4. Off-site Documentation

Following Discovery, we will work offsite to document our findings and recommendations for your project(s) and overall site in our ACC Assessment.

5. Presentation of Findings and Assessment Document Review

This final step in the Assess and Advise process will be the delivery of the Assessment and a final meeting that highlights our recommendations on how you can improve in your use of ACC services and gain a larger return on the investment you have made!

Contact your IMAGINiT representative to learn more about our Autodesk Construction Cloud **Assess and Advise** service offering and steps you can take to maximize your usage today.
