

Assess and Advise Service: Leica Hardware and Software

Are you taking full advantage of your Leica hardware and software? If your team has been using the hardware and software for some time and has developed routines, it's a good practice to implement periodic reviews to ensure they are not missing out on features that can save your organizations time and increase overall productivity.

Whether you need a quick check or a thorough review, IMAGINiT Technologies can help.

Assessment and Recommendations

IMAGINiT offers services designed to assess an organization's processes, workflows, hardware, software knowledge, standards and environments. Our Reality Capture industry experts can assess how HDS hardware and software are being used, and based on our findings we can recommend changes to enhance performance, productivity and abilities, as well as provide direction for the possible adoption of new technologies, services and enhanced workflows.

Assess and Advise Services

This service is for organizations looking to improve how Leica HDS technology is being used in a typical project environment.

IMAGINiT experts spend one day (up to 8 hours) in face-to-face or virtual interviews with users learning how the organization functions; how data is collected, managed and shared; and the users' knowledge of the technology. The team reviews the findings, develops recommendations, and creates a report that conveys their findings and recommendations and how they address the company's challenges.

Next steps
