HireHop

HireHop was built to give the hire and rental industry an affordable and modern cloud software solution. Built by people who have worked in the hire and rental industry, as well as our users who have told us what they need and want. This has enabled the team to create the most powerful, intuitive and versatile equipment rental software in the world.

Create

Hire, Sales and Labour inventories. Produce jobs, projects as well as interactive and customisable documents, including quotes, purchase orders, invoices, PAT test certificates, PAL labels and statements.

Management

Email documents from your own email address using HireHop, viewing and storing them in jobs. Perform stock checks, log PAT Tests, LOLER tests and services. Manage labour with the resource planner. Utilise powerful barcode scanning features. Build packages and pre-prepped kits.

Collaborate

Multi-depot, multi-user and multilingual. Synchronise with accounting software and other cloud apps. Assign job and project managers and set tasks for other users.

Customise

Change any word or phrase, manage user permissions, change the look and feel and, to top it all off, with the API you can interface and completely customise your HireHop.
