

Luxibel launches new series of pars

At the AED Customer Nights 2022 and the Prolight + Sound exhibition in Frankfurt, Luxibel launched its new series of pars. All new pars come with a humidity extractor which is already widely used in the car industry. This humidity extractor uses electrolysis which turns water into gas, so there won't be any moisture left in the fixture. No more trouble with temperature changes and condensation.

Next to all these upgrades, all units will come with tophats attached to them. This will control the light spill and reduce the viewing angle to the lens. The new top hat accessory is also compatible with the previous Luxibel B Par generation and models.

The largest fixture of the new par series is the B PAR360Z, which is a very compact, yet extremely powerful 7x 60W zoom LED par which creates vibrant colors and has a zoom range of 4 to 45 degrees. This makes the B PAR360Z a creative unit that can be used for events, exhibitions, theatre and much more.

Next to this big brother, there are a few smaller siblings. The B PAR105RGBW V2 is a compact yet very powerful par with a 7x 15W LED engine in a 15° angle. It features high-saturated colors, an excellent color mix, beautiful dimming and it fits into a NX34/30V truss. The B PAR180RGBW V2 is a more powerful par with a 12x 15W LED engine in a 25° angle. These models can be used outdoor and can take a couple of rain showers.

For long term and heavy-duty outdoor use, Luxibel created the IP66 version of the B PAR180RGBW V2. This par has heavy-duty wired waterproof connectors.

Last but not least: with their unique power to size ratio, the B pars are a class of their own.
