Shaping the Future of Concrete

Your trusted partner for
heavy load lifting and handling

More than 50 years of experience & innovation

ACIMEX, the expert in industrial gripping and heavy lifting, designs and manufactures tailor-made handling solutions.

A recognized market leader, ACIMEX develops innovative and reliable equipment to lift, move, and position large concrete, steel, or PVC parts. From massive pipes to complex structures, every ACIMEX solution is engineered for performance, precision, and safety.

- ▶ Tailor-made, high-quality solutions designed for every client's specific needs
- ▶ Safe and reliable lifting capacity up to 50 tons
- ▶ Robust equipment built to perform in the most demanding environments
- ▶ Turnkey systems for the design and installation of complete handling lines
- ▶ Automated solutions to optimize and streamline industrial processes

ACIMEX provides unique solutions for unique projects.

▼ At the cutting edge of technology

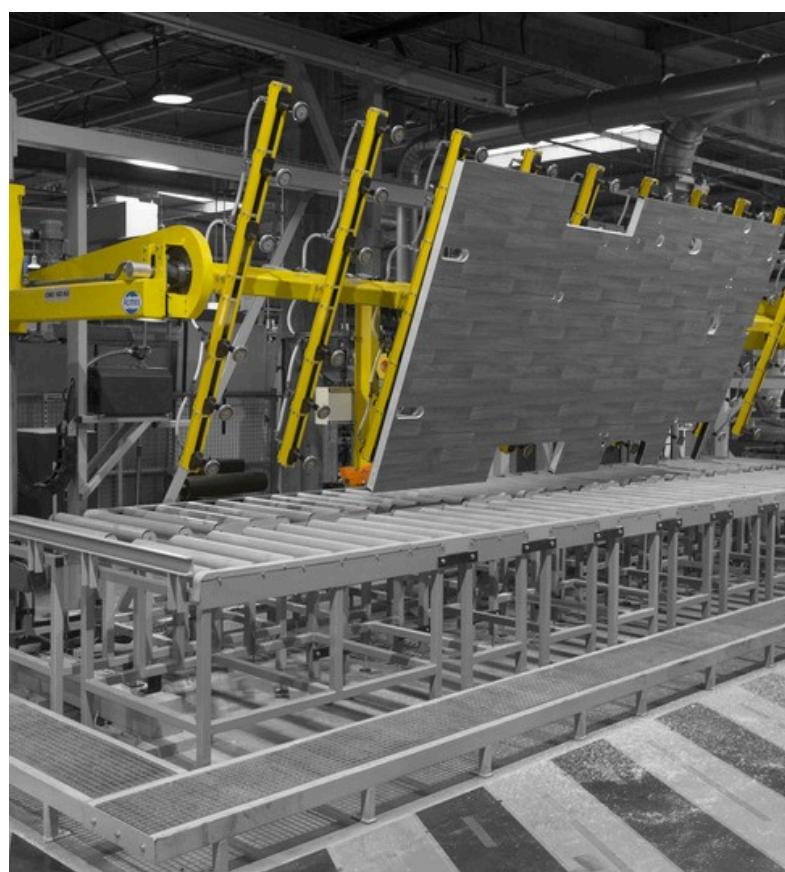

ACIMEX uses a variety of technologies to provide customized solutions for its customers:

▶ Vacuum handling

A powerful and versatile handling system that combines productivity, safety, and simplicity. Perfectly suited for fragile products, it preserves the integrity of every part.

▶ Mechanical handling

This more traditional lifting method uses mechanical or hydraulic grabs. ACIMEX engineers and customizes each grab to perfectly match the specific shape, weight, and requirements of every customer's product.

Wide areas of expertise

CONSTRUCTION

Concrete pieces

Moving, turning and tilting precast concrete pieces is one of ACIMEX's main fields of expertise. Its products are particularly adapted to the public construction sector.

Demoulding turning beam

ENERGY

Pipelines

Handling a long tube in a harbour or on a pipeline building site becomes easy owing to the vacuum handling devices, fitted with rubber suction pads. They allow careful handling without any surface damages.

Vacuum system for pipe

HARBOUR

Reinforcement of dikes

Breakwaters are now built with these newly designed concrete blocks; ACIMEX has developed its marine range for the lifting and the precise positioning of armour units.

C-hook

METALLURGY & AEROSPACE

Steel sheets

However light or heavy the metal sheet is, the vacuum beam lifts and carries it away to its final destination, while respecting the integrity of often-expensive products.

Vacuum beam for aluminium plate application

TUNNEL

Segments

ACIMEX's expertise in this domain dates back to 40 years, during which it has designed more than 500 vacuum devices for the handling of tunnel segments and for tunnel boring machines of all diameters.

Self-powered hydraulic clamp

RAILWAY

Rails and sleepers

With ACIMEX's tailor-made solutions, the lifting and positioning of sleepers and rails are optimized for greater efficiency and safety. Our latest innovations go even further, now enabling the handling of complete tracks.

Sleeper positioner

About ACIMEX

Founded in 1971, ACIMEX first earned its reputation in the handling and lifting of steel and sheet plates, serving the demanding needs of the steel and mechanical engineering industries. Building on this expertise, the company expanded its know-how to the handling of concrete parts and large pipes. Following its acquisition by CBE, a global leader in tunnel segment mold design, in 2009, ACIMEX extended its solutions to the tunneling sector.

Today, as part of the CONSTRUX Group, a key player in precast concrete solutions, ACIMEX delivers a complete range of heavy-lifting solutions, combining experience, innovation, and reliability to meet the most challenging industrial handling needs.

54 years of experience | **66** importing countries
70 machines produced/year | **950 T** of lifting capacity/year

About CONSTRUX GROUP

Construx Group, founded in 2003 in Belgium, is a global leader in moulds, machinery and circulation lines for the precast concrete industry and on-site formwork. Our brands each bring unique expertise:

Construx Weckenmann: Tailor-made moulds and automated circulation plants for industrial precast production

Construx On-Site: Specialist in on-site formwork solutions for civil works and construction projects, and (rental) modular formwork systems

CBE: World leader in moulds and carousel systems for precast tunnel segments

Acimex: Advanced vacuum lifting and handling technologies

12 production sites | **+€ 100 M** turnover
+700 employees | **+80** countries projects
