

# Haulier Management System (Podswap)

Our Haulier Management System, known as Podswap, is a transport management solution designed for logistics companies and hauliers that are working together. It includes features such as job allocation, tracking, invoicing and proof of delivery (POD) management.

The Haulier Management System component within Podfather focuses on optimising transport management for hauliers and logistics companies by facilitating the smooth movement of work, and completed job confirmations to all parties. It's fast, efficient and gives you a paperless process across your logistics network.

## Core Features

Our Haulier Management System has a number of key features designed to streamline your process flow and improve operational efficiency.

### Job allocation

Automatically upload jobs and allocate them across your logistics network, to both your own fleet, and those of your third-party haulier(s) with ease.

### Tracking jobs & loads

Track where your loads are, and which jobs have been completed via our driver app. We collect location data even when they are out of mobile signal range.

### ePOD

Remove paper from your proof of delivery process and capture confirmation electronically. Includes photos, signatures and time/date/location stamps.

## Benefits

Our Haulier Management System facilitates the smooth allocation, **tracking and reporting of jobs across your entire logistics network.**

Remove paper from your processes. Electronically allocate work to those that need it, all with a few simple clicks. **Remove paper, cut processing time and improve efficiency.**

Remove guesswork from your operation. Podswap users **get real-time visibility and full-time accountability of all the work** being carried out across their logistics network.

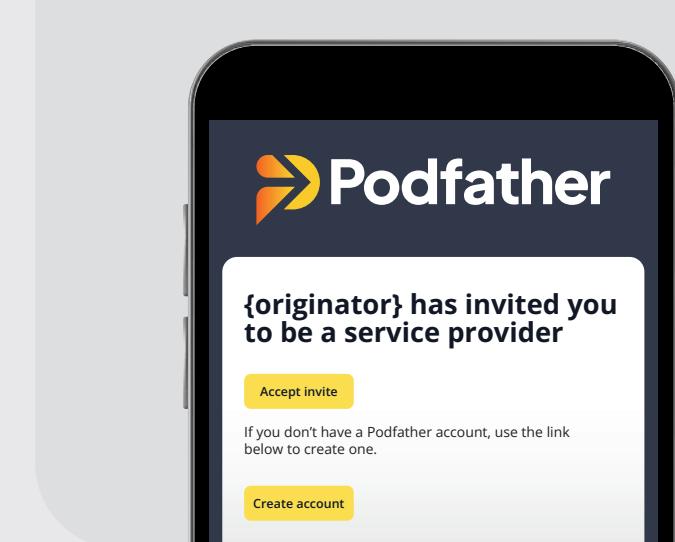

Running all your jobs through one system means you have a **clear audit trail of the whole process relating to each of your jobs**, irrespective of who completed them.

## Use Case

If you don't have a vehicle fleet, or if you regularly rely on one or more third party haulier(s) to complete work, you can use our Podswap feature to allocate, track and report on job performance.

For companies receiving and completing work from others, you can use our Podswap feature to manage the whole process, from load allocation through to job completion.

*"Podswap shows what is moving where and when, and which jobs have been completed and by whom. It's a transformational solution for those operators wanting to integrate their own and contract fleet work to streamline processes, improve operational efficiency and enhance service"*

**Colin McCreadie,**  
**Managing Director, Podfather**
