

## THE AKK SERIES

### FLEXIBLE MESH WELDING LINE FOR REINFORCEMENT MESH WORKING FROM COIL

#### INNOVATIVE CONCEPT IN MESH WELDING

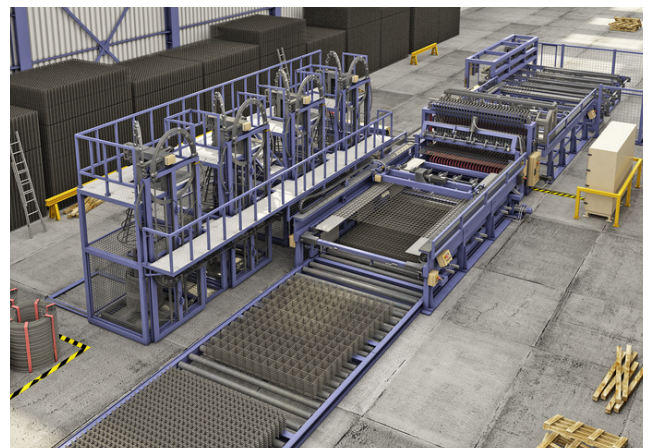

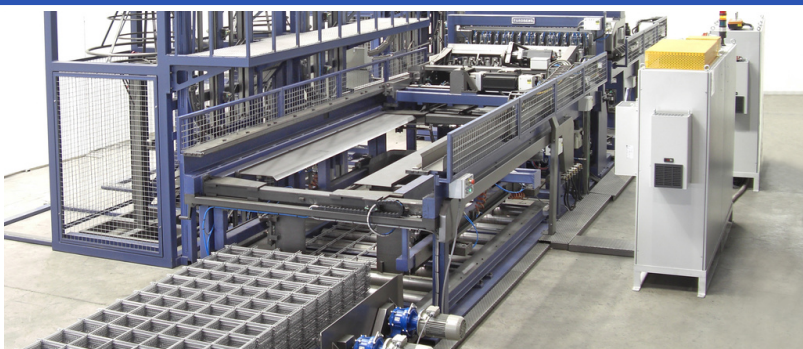

All advantages from off-coil and pre-cut wire fed welding lines are combined in one machine, as the AKK is capable of producing large and small batches—orders consecutively without any downtime for setup

Any type of mesh, produced instantly without any adjustments

Machine concept increases productivity significantly, in comparison to conventional welding lines working from coil

Cross wire welding above and below line wires, eliminating the need of a mesh turner

Equipped with our worldwide PATENTED Automatic Wire Orientation System “AWOS”, which is the core of the machine and ensures 100% flat mesh regardless of wire properties and high-speed roller straightening quality

**No downtime
