

Why work with us? Our promise

We go the extra mile for you

If you are looking for something specific, we will help you find it. Even if that means searching for a unique quarry, setting up a temporary production unit or devising out-of-the-box logistical solutions.

We look beyond the technical specifications

We work with carefully selected suppliers and manufacturers that are as passionate about aggregates as we are to ensure stability during your project. We also endeavour to find creative and workable solutions.

We promise short lead times

Our large stock and reliable network of drivers and trucks mean your order can be swiftly dispatched to you from our central location, located near the Port of Antwerp.

INTER-MINERALS
COLOURED BY NATURE

Aggregates.

Coloured by nature.

About us

Inter-Minerals is an independent, family-run business that supplies aggregates in all manner of colours and sizes for many different applications. While this is a niche market for many companies, it is Inter-Minerals' core business.

Inter-Minerals has a wide range of **CE certified products** which enable you to meet the needs of a rapidly changing market.

Logistics play a very important role in our services. Our team works with clients and partners to find the right solution, taking into account all possible factors.

A significant advantage of Inter-Minerals is our warehouse, **located centrally between Antwerp and Brussels** on the Brussels–Scheldt Maritime Canal. We unload over 100,000 tons of materials here each year. Our other core activities include stock management,

bagging, blending, drying, sieving of materials according to our clients' specific needs.

Our company is well-known for its **very client-focused approach**. After we have consulted closely with you, we guarantee that samples will be rapidly sent out to you. Then our experienced logistics department takes over and makes sure that your order is handled on time.

Inter-Minerals is sure that the combination of our experience, competitive pricing and excellent service level will make us a **reliable and long-term partner for your organisation**.

Applications

Industrial buildings

Inter-Minerals offers a wide range of attractive quality products for industrial buildings which add something extra to prefabricated wall elements. Some of these products are tried and tested classics that have been used for many years and give a timeless impression. Wall panels can also be combined creatively with different aggregates to give character to your building.

Architectural concrete

Architectural concrete is creative and beautiful. It is also strong and structural! The power of architectural concrete lies in its unlimited forms, textures, colours and aesthetic possibilities. Inter-Minerals can also be your partner at the start of a project and suggest different aggregates which meet the requirements of designers, architects and clients.

Decorative aggregates

Dull paths and tired water gardens can be transformed into paradisiacal scenes. Our wide range of products enable you to add stunning, natural colours to gardens.

Concrete paving

Concrete paving with exposed aggregates plays an important role in our public spaces. Safety, supreme quality and a unique and vibrant look play a key role here. Striking visual effects can be achieved by combining different finishes. Inter-Minerals has a tailored range of customized premium surface aggregates that are ideal for concrete paving.

Road construction

Urban designers can combine the advantages of concrete (durability, low maintenance) with endless colours and textures to turn the concrete in public spaces into a high-grade material. Coloured aggregates can also be used in top-layer asphalt to add colour to bus lanes and cycle paths.

Terrazzo

Terrazzo floors are used nowadays in office buildings, airports, hospitals, schools, and in homes. It is possible to make modern terrazzo from materials other than marble chips. Granite, onyx, glass, pieces of mother of pearl have all been used to provide a unique appearance. Epoxy resins are sometimes used instead of cement to provide a slightly different appearance. There are unlimited design possibilities.

Resin bound / Resin bonded

Resin can be used as a binder instead of concrete. This can be combined with our wide range of products to create stunning driveways or other surfaces. Some of our products can also be used in an anti-skid coating that gives a particularly pleasing finish on bridges.

Other products

In addition to the applications shown above, Inter-Minerals also offers mineral products for applications such as water-filtration, high-density concrete and foundries.
