

RUBBER SCREENING MEDIA

RUBBER SCREEN MATS

Manufactured from HIGH WEAR RESISTANT MATERIAL of premium quality natural SAR Grade rubber with a shore hardness of 65.

Reinforced with a heat treated polyester cord which is resistant to deformation during use.

This rubber is specifically designed to demonstrate excellent resistance to impact abrasion to European DIN22102 standards.

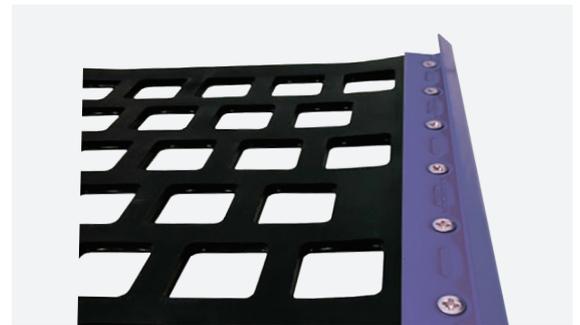

Rubber screen mats offer many advantages even with a lower open screening area than woven wire mesh screens, especially on smaller apertures.

- Ideal as complete decks on larger screen boxes or as an impact section prior to a woven wire mesh screen.
- Reduced noise levels improving environmental conditions.
- Non-corrosive and hard wearing.

ROUND END SLOTTED

SQUARE HOLES

THE SCREENS ARE AVAILABLE IN:

IMAGE	HOLE TYPE	APERTURE	RUBBER THICKNESS
	Square Holes	3mm to 125mm	3mm to 50mm
	Round Holes	8mm to 150mm	3mm to 50mm
	Round End Slotted	3mm x 12.5mm to 30mm x 40mm	3mm to 20mm
	Square End Slotted	12mm x 24mm to 70mm x 95mm	7mm to 25mm
	Hexagonal	40mm to 125mm	10mm to 25mm

* Other specifications available upon request.

POLYURETHANE SCREEN MATS

Polyurethane is an ideal material for screening wet or dry material. It offers abrasion resistance and is flexible enough to assist in avoiding material build up.

FLIP FLOW MATS

Flip Flow mats are used when screening difficult material and are highly wear resistant, they are perfect in wet and sticky conditions.

We can manufacture Flip Flow Mats with either profiled edges or as bolt down type mats and can offer in round, square or slotted apertures in various thicknesses.

We manufacture for all machine types including Spaleck, Kiverco, Binder and many more.

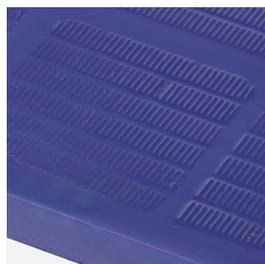

POLYURETHANE MATS

Brimonn polyurethane tension mats are manufactured with metal cable reinforcement. This design technique increases the resistance to strain by absorbing the tension.

The flexibility of the polyurethane is ideal for use when material either builds up on the flat screening surface or pegs during screening.

Polyurethane mats can be manufactured to any size or specification to enable them to fit to any machine.

POLYURETHANE MODULES

Polyurethane Modules are made with an internal welded steel frame to offer strength and support. This modular system is ideal for Screening and Dewatering.

Polyurethane Modular panels are quick to replace without the need for superior knowledge or tooling. Individual panels can be replaced quickly which aids in a reduction of downtime.
