

Electrical & Data Solutions for Industrial Operations

Driven by Excellence. Powered by People. Focused on Safety. Built for Growth.

Company Overview

Powering industrial manufacturing with precision and reliability

Since 1997, Process Control Services (PCS) UK Ltd has delivered specialist electrical and data engineering solutions to manufacturers across the UK. We provide support for **industrial sites** to keep critical processes running safely, efficiently and in full compliance.

Our Mission

To make complex industrial site processes simpler, safer and more efficient to run and manage.

Through technical expertise, trusted engineering and a customer-focused approach we deliver long-term performance and reliability, not just short-term fixes.

What We Do

From design and installation to maintenance and compliance, PCS provides full lifecycle support:

- Improved system performance
- Compliance with industry and statutory standards
- Long-lasting, reliable engineered solutions

Company Values

Operational Excellence

Skilled people, strong systems, great results

People

Effective teamwork, personal ambition, professional fulfilment

Safety

Great training, robust processes, safe outcomes

Growth

Higher standards, greater skills, more success

DSEAR & ATEX

DSEAR & ATEX Solutions for Hazardous Environments

We help you move from uncertainty around hazardous area safety to complete confidence that your systems are installed and maintained to meet full ATEX compliance.

As one of the UK's **ATEX-certified** electrical engineering specialists, we deliver safe, reliable solutions for hazardous zones, ensuring every installation performs to the highest standards. All work complies with **BS EN 60079**, and our engineers hold the relevant **CompEx** certifications, giving you total assurance of safety, reliability and performance, even in the most demanding environments.

We provide:

- ATEX-compliant design and installation
- Hazardous area inspections and reporting
- Ongoing maintenance and safety assurance

Inspection & Testing

Comprehensive Electrical Inspection & Testing

Ageing electrical infrastructure can be concerning, especially when you're responsible for critical operations and downtime comes at high cost. Our inspection and testing services provide peace of mind by clearly assessing system health and identifying issues before they become failures, keeping you confident, protected and in control of your site's electrical safety and compliance.

Our engineers are trained to the latest **BS 7671** standards and certified to **C&G 2391-52** for initial and periodic inspection and testing.

We deliver full periodic inspections for organisations nationwide, trusted by 100+ production sites.

Thermal Imaging Surveys

Using advanced infrared technology, our surveys identify hidden faults and early-stage failures, helping to:

- Reduce fire risk
- Prevent unplanned breakdowns
- Strengthen predictive maintenance strategies

Data Network Installations

Industrial Data & Networking Solutions

The world of data moves so fast, keeping up to date can be a challenging task, especially when production up-time is crucial. That's why our data technicians are here to help.

Outdated or unreliable networking can slow down operations and disrupt productivity. Our solutions replace ageing systems with fast, stable and modern infrastructure designed for continuous industrial performance.

Our Electricians and Data Specialists deliver everything from simple upgrades to full system installations, using the latest **copper, fibre, and Wi-Fi technologies** to create a robust, dependable network that keeps your site connected and running smoothly.

Our capabilities include:

- Network design, installation, and upgrades
- Fibre and copper infrastructure
- Industrial Wi-Fi
- Access control & CCTV systems

Electrical Installations

Electrical Installations from Design to Commissioning

Large (capital) projects can be a daunting task and huge time burden, especially when many staff still have other responsibilities to take care of. At PCS, we set out to take the load off your shoulders with our professional team of engineers and project managers on hand to make sure everything runs smoothly and stress free.

From concept design to installation, commissioning and handover, we ensure every system is delivered safely, efficiently and to the highest standards of quality, reliability and compliance.

Our team works closely with each client to provide solutions tailored to site requirements and long-term performance.

We also design and install **EV charging infrastructure**, offering complete solutions for modern energy needs.

Planned Maintenance

Proactive Planned Maintenance for Compliance and Reliability

Feel like you're always on the back foot? We help you transition from reactive fixes and compliance concerns to a proactive maintenance approach that keeps equipment safe, compliant and performing at its best.

Our engineers check systems against their intended design parameters, helping you meet statutory requirements with confidence and maximise uptime.

Benefits include:

- Early identification of faults
- Reduced downtime and unexpected failures
- Improved long-term system reliability

Electrical Absence Cover

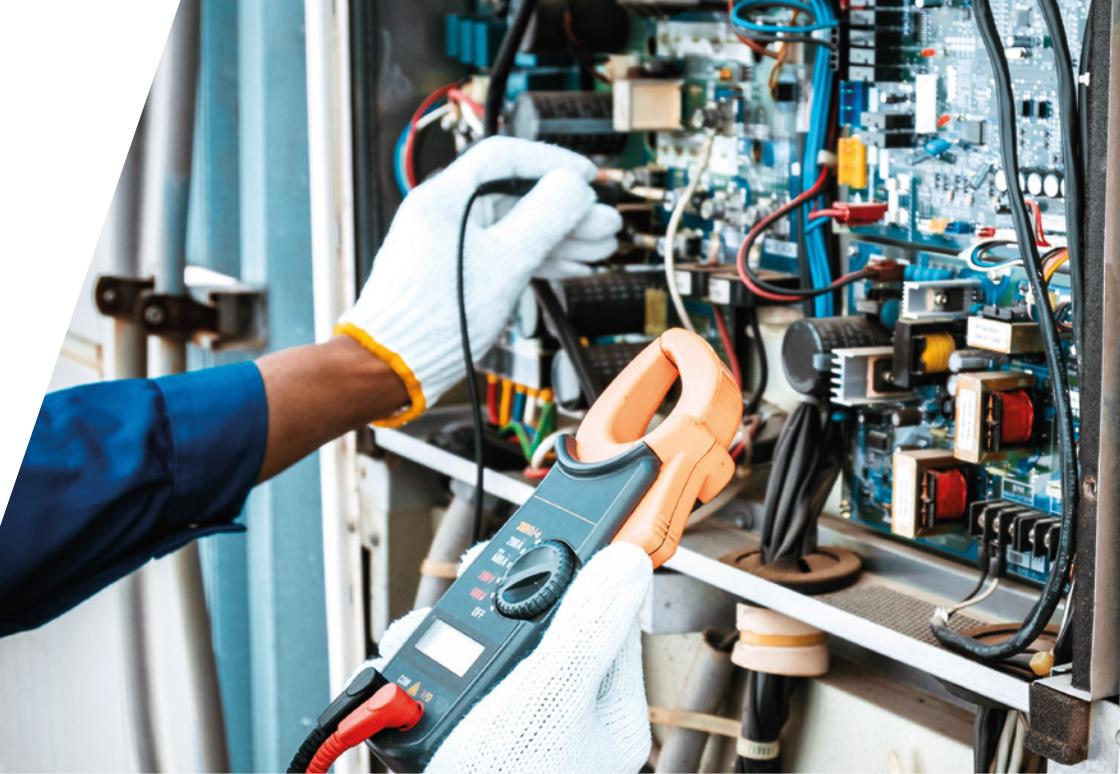

Flexible On-Site Electrical Support

Our shift cover service means you no longer need to worry about staff absences and holidays, peak workloads or unforeseen requirements. You can feel assured that your operations will continue smoothly with our team there to cover when you need it most.

Our engineers integrate seamlessly with your team, ensuring projects and maintenance stay on track and continue running smoothly.

We ensure:

- Smooth continuation of maintenance and projects
- Minimal disruption to operations
- Full compliance and safety standards

| Control Panels

In-House Design & Manufacture of Electrical Control Panels

The acquisition of BJ Control Panels strengthens our ability to transform legacy control systems into reliable, high-performance solutions.

Our specialist team are on hand to work with you to design and build control panels that integrate seamlessly into your operations, delivering confidence, consistency and long-term reliability.

Every panel is built to enhance performance and long-term reliability.

- Bespoke control panel design
- Panel manufacture and testing
- Installation and commissioning
