PARTS & SERVICE

“THE TRUE COST OF A MACHINE IS NOT THE PRICE, IT’S THE DOWNTIME.”

Thomas Reed, Managing Director

Our parts and service departments work hand in hand to respond to live situations quickly, minimising downtime and keeping you on schedule when breakdowns or glitches occur. Our real world experience allows us to understand the importance of budgets and time frames, and we will go out of our way for our clients. Whether you are involved with major infrastructure projects using large scale plant and equipment, or a solo operator working on smaller projects, we understand that keeping your equipment working is crucial.

Our skilled engineering team has the ability to conduct anything from hydraulic repairs to engine rebuilds, or servicing to fixing electrics, either on-site or in our Wiltshire-based purpose built workshop.

With our highly experienced fitters and fully equipped vans, we can deal with almost any on-site repair on all types of plant/machinery. Our service team has the capabilities to conduct a range of repairs and procedures for your machines, such as welding & fabrication, line boring, hydraulic hose repair, DPF regeneration service, and air conditioning & recharge.

Our core services include:

- On-site repairs and breakdowns
- On-site servicing and maintenance
- Machine overhauls and upgrades
- Maintenance contracts
- Welding and fabrication
- Bucket repairs
- Line boring

OUR IN-HOUSE CAPABILITIES

We have a large range of in-house capabilities utilising our purpose built workshops with the latest technology and service diagnostic equipment.

At Reeds we undertake a large array of both big and small repairs, refurbishments and overhauls. Our team are experienced in a variety of skills including welding, line boring and machinery diagnostic repairs. Whether it's a small repair (which can be done on or off-site) or a major refurbishment project completed in-house, we can help. We are specialists in what we do and our years of industry expertise means we have vast knowledge of construction machinery.

As a company with our own fleet of machines working throughout the year, we understand the importance of keeping equipment running and the detrimental impact downtime of machines can have, not only for costs but for deadlines too. Our fully equipped vans enable our service department to travel to where you need us, and with the backup of office support you can rely on us in emergencies.

We have the ability to come to your site, diagnose the problem, and conduct the required works to get your machines up and running, or for larger scale works we can accommodate this in our purpose built workshops.

For long term peace of mind we can provide maintenance contracts.

A guarantee of our engineers' long-term dedication to assuring you that when your machinery breaks down we will get it in working order as soon as possible.

Having the peace of mind that an onsite repair for your plant is only a phone call away at Reeds.

LINE BORING

As one of the first in the UK to have a line boring machine, Reeds are a specialist in this department. We have experience working on all main manufacturers machinery, and are able to work across the UK with our self-sufficient team and various sized machines, so we can be exactly where you need us, when you need us.

Line boring has the ability to repair worn pivot points back to the manufacturers specification, or we are even able to adjust the pivot points so smaller attachments fit larger machines, for example. This opens your machine

up to a whole new world of attachment options and is a cost effective way to repair the machine, as apposed to replacing it.

This generally fast process will save you downtime on your machine and can be done on any accessible pivot point. As an overview the process includes cleaning out the pivot point to a serviceable condition, welding the hole undersized, then cutting the points back to the bush/pin manufacturers specification, returning your machine back to its former condition.

Plant repairs is one of our specialities. No matter how large or small the plant may be, we can repair it to keep your business moving. Our fleet of vehicles are fitted with mobile welding equipment, allowing us to visit most locations to carry out your welding requirements.

Our welding engineers are coded to BS EN 9606 and use MMA, MIG, MAG and TIG welding processes. We have extensive experience working with ferrous and non-ferrous materials including stainless steel and aluminium.

WELDING & FABRICATION

PARTS

Our parts department has an abundance of parts readily available so we are prepared to rapidly respond to your machines emergencies and can offer same day delivery on most of our stock. We pride ourselves in our swift turnaround, quality parts acquisition and installation service both on and off-site and are always prepared to go the extra mile for our clients - responding to live situations with an understanding that only our real world experience gives us.

Our flexibility allows us to work to your requirements, by offering genuine and non-genuine options depending on your budget and desired finish. Thanks to our years in the industry, we are not only able to advise you of the best possible solutions, but we are also able to source a large range of plant machinery spares from years of strong relationships built within the industry. We offer a huge range of filters, tracks, under carriage-

es, turbos, pumps, belts, service exchange units and more from various manufacturers of construction and agricultural equipment at competitive prices. Whether you are involved with major infrastructure projects using large scale equipment, or a solo operator working on a smaller scale job, keeping your equipment working is crucial.

We provide a flexible service to cater for your needs at all levels and offer parts for planned maintenance such as...

- filters
- oils
- ground engaging tools
- undercarriage parts

Our fast response and turnaround minimises downtime and helps you keep on schedule when breakdowns and glitches occur.
