

Cloud IT

Flexible, dynamic **backup and recovery**

Hosted Exchange

Microsoft's Outlook software integrates seamlessly with the cloud, allowing users to access and sync their emails, Contacts and calendars from anywhere, on any device. Encryption and anti-virus protection ensures your connection to and from the cloud is always secure.

Pricing & Support Options

We can deliver cloud services on a pay-as-you-go, pay monthly, or fixed-price basis. All our cloud offerings reside with dedicated hosting specialists and are backed up by our expert in-house technical support team, with 4-hour SLAs to expedite the recovery of critical data.

Cloud PC

With a Cloud PC solution from Silver Lining, your desktop and all your applications are hosted in the cloud, allowing you to access them from any computer in any location.

Online Backup

If something went wrong with your computer hardware, would you lose your valuable data? Backing up your files to the cloud offers a safety net should the worst happen, allowing you to get back on your feet as quickly as possible. Silver Lining's backup service is secure, resilient, and can be automated to protect your data in real time.

Flexible, Scalable & Resilient

The beauty of the cloud is that the workload of delivering data and applications to users is regulated to our resilient data centre, meaning you'll save on expensive equipment and maintenance costs.

This method of delivery also makes the platform inherently scalable; adding new users is a hassle-free process when their data is served directly from the cloud.

Taking your office out of the equation enables remote working, which in turn offers your business rock-solid business continuity. In the event your office becomes inaccessible, employees can simply access the cloud and continue working remotely, with no loss of sensitive data.

Have questions? Call us on 0345 683 11 11, email us on info@silver-lining.com or chat to us on our website.

Your data accessed from **anywhere in the world by any device** instantly without costly infrastructure.

Silver Lining has built highly available infrastructure that allows you to 'tap into' services available.

Each application available is built on redundant servers and VMs to ensure availability is high. You only require a network connection to our data centres via a web browser for full access to email from us, as well as a whole host of other applications.
