

Avoid migration migraines with Bandwidth

Moving your comms to the cloud can be complicated, risky, and time-consuming. In short: a real IT headache. The BYO-Carrier approach gives enterprises the flexibility they need for success by unbundling telephony from UCaaS and CCaaS platforms. In doing so, you can bring Bandwidth as your carrier for SIP, emergency services, and SMS and leave the aspirin at home.

Why are IT leaders choosing BYOC? →

Unmatched migration control

Which is better: a nonstop flight or one with multiple layovers? Trick question; try private jet. When you bring your own carrier, you get private jet treatment. You're in control, but the pilot (cough, Bandwidth) does all of the work—plus, there's way more legroom. Come direct-to-carrier for total control over your telephony, easy rollbacks, and porting on your own time.

Direct-to-carrier access

Ever tried to resolve a tech issue and ended up in a never-ending cycle of finger-pointing? Or worse, being handed off to one person after another like a hot potato? If an issue arises, BYOC with Bandwidth means troubleshooting is as simple as sending an email and receiving an answer. You're zero hops away from your communications provider, so you can resolve issues quickly and address issues before they become problems.

The easiest path to the cloud

While we don't have a crystal ball (we're Magic 8 ball fans here at Bandwidth), we know your future is in the cloud. By integrating with the leading UCaaS, CCaaS and conferencing platforms, it's easy to move between on-prem and cloud platforms now, or years into the future. Once you've ported your numbers to Bandwidth, simply activate your numbers and enjoy the ride. Outlook good.

Scale & save

Pool your voice, messaging, and emergency service usage across your comms tech stack and only pay for what you use (not max capacity) when you come to Bandwidth for SIP, emergency, and messaging. You'll also get access to preferred pricing and volume discounts, so both your fancy software platforms AND the power behind it become even more cost-effective.

One platform to power them all

Bring Bandwidth's cloud-ready SIP, emergency, and messaging to your UCaaS and CCaaS solutions with our software-driven, global Duets and BYOC integrations:

duet for GENESYS

Gain control and flexibility over your contact center's telecom integrated with Genesys Cloud CX.

duet for Microsoft Teams

The only direct-to-carrier solution that offers SIP, emergency, and messaging with Direct Routing & Operator Connect.

duet for RingCentral

The first BYOC solution for RingCentral's Message Video Phone (MVP) platform.

zoomphone

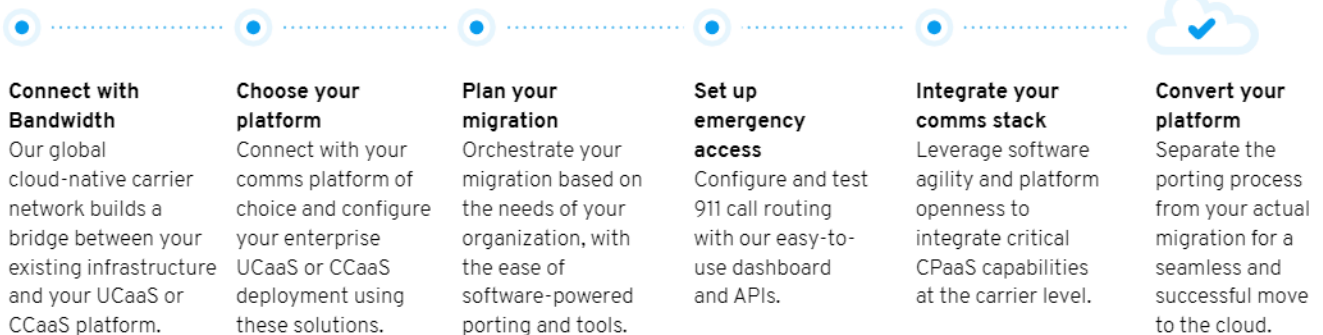

Bring in Bandwidth for direct-to-carrier services with your Zoom integration.

“Integrating our CCaaS platform into Bandwidth's universal platform will make new agent set-up, troubleshooting, and any future migrations so much easier. With Bandwidth, everything just works—there's an integration available for nearly every major communications platform our organization needs from UCaaS to CCaaS, which opens the door to even more savings and efficiency.”

Vipin Kalra Sr. Engineer, Collaboration and Contact Center
