

Connectivity with SD-WAN

Connectivity is crucial and we understand the importance of high quality business broadband that helps your operations run as smoothly as possible.

What we can offer

Silver Lining has a wide range of different connectivity offerings, which we deliver in several ways, including direct internet, MPLS and SD-WAN.

The different connectivity options can be mixed and matched to ensure your network is built using proper connectivity for the right location and task.

Silver Lining understands that making sure your communications are fully connected is crucial. With our robust, reliable services, we can offer total unification of your business' data.

Why SD-WAN?

SD-WAN is a virtual network which combines technologies such as MPLS, LTE and broadband internet services to establish secure connections between users and applications.

Employing a managed SD-WAN provider will overcome the challenges WAN would encounter, such as transmission time over distance and requiring integration of multiple service providers to cover global geographies.

The intelligent traffic measurement ensures optimal routes for all users, reducing costs due to enhanced monitoring capabilities that guarantee network efficiency during peak times when congestion is greatest.

Have questions? Call us on **0345 683 11 11**, email us on **info@silver-lining.com** or chat to us on our website.

Keep your business connected with **fully managed SD-WAN.**

Every year, the amount of data we store and transmit grows at an unprecedented rate. To counter this we invest in bigger storage devices and more powerful hardware, however, our Internet connections are often left behind-despite being the core data avenue.

Our fully managed SD-WAN network solution directs traffic using a centralised control function, which increases performance and delivers exceptional user experience. This then leads to increased business productivity, a nimbler infrastructure and reduced costs for IT.

Reduced Network Downtime

By reducing network downtime, you can avoid frustrating and costly issues and improve your productivity.

Reduce Costs

Help reduce costs by reducing network complexity and providing more flexibility in how your network is deployed.

Outage Detection

Don't put all your eggs in one basket. Avoid outages by detecting issues and automatically rerouting traffic.

Adaptive Traffic

Automatically adapt traffic flow in real-time, improving network performance and reduce operating costs.

Higher Performance

Higher speeds and more reliable connections make it possible to do more business online.

IP Secured

Keep valuable data protected from breaches and other security threats with reliable IP secured SD WAN.

Centrally Configurable

Take control of your network resources, troubleshoot and configure your network from a single, centralized location.

Auto Path Selection

By automatically selecting the best path for data traffic, it can help ensure optimal performance and reliability.
