DIGITAL IDENTITY FOR DBS AND RIGHT TO WORK

Verify identity anytime, anywhere

Applicants can easily verify their identity from the comfort of their own home.

Speed up your onboarding

Less chasing your applicants, fewer back and forth interactions and faster processing times.

Risk minimisation and fraud detection

Digital identity provides a more accurate level of check for both visible and non-visible data (NFC chip data)

What we are planning

Streamlined DBS checks

Applicants can use DDC ID to complete their DBS checks without having to present their documents in person, saving you time and resources.

Paper free applications

Online address verification checks to save applicants from having to produce any further documents.

Remote right to work checks

Obtain your statutory excuse without having to check and copy the applicant's original identity documents in person.

What does this mean for you?

Organisations can now complete DBS and right to work checks without having to verify the applicant's original documents in person. Digital identity is built into the existing DDC platform and can be simply turned on/off as required.

DDC
DUE DILIGENCE CHECKING

THE APPLICANT JOURNEY

Before starting

The applicant will be required to nominate their valid British passport. This needs to be the biometric chip type so we can scan and read the chip to extract the photo for liveness tests.

PASSPORT

DDC ID app

After completing DDC's online 'smart form' applicants will then be guided to download the DDC ID app by scanning a QR code. After that it's a simple three step process:
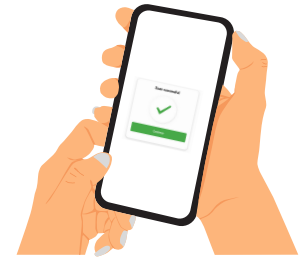

Step 1: Scan

The smartphone camera is used to scan the document before reading the passport chip to check all the security features.

Step 2: Selfie

The applicant takes a selfie and completes a liveness test to compare the photo on the identity document.

Step 3: Submit

All the details are securely transferred to DDC and the data is wiped from the app for security purposes.

Digital identity includes:

- ✓ Document verification
- ✓ Online address verification
- ✓ Facial recognition
- ✓ Caseworker check
- ✓ Liveness test
- ✓ Name and DOB confirmation
