

Lubo Recycling Solutions - Total solution provider in C&D + C&I waste streams

 Over the last decades, Lubo Recycling Solutions has developed itself into a key player in the recycling industry. Located in Emmen (NL), but with customers all over the world, system integrator Lubo focuses on the heavier waste streams, with high-quality solutions. Nowadays both Construction & Demolition (C&D) and Commercial & Industrial (C&I) waste sorting plants consist of many more sorting technologies than just star sieves. And in all these technologies lies Lubo's expertise. Next to the two mentioned main waste streams, Lubo is also active in Municipal Solid Waste (MSW), Organic Waste, Waste-to-Energy, and Waste from Electrical and Electronic Equipment (WEEE).

Lubo understands that no installation is the same, so it develops custom-made installations that meet and exceed the customers' needs and requirements. And since the composition of waste streams can change, Lubo continuously optimizes installations, once built. Creating long-lasting customer relationships is part of Lubo's DNA — everything to offer perfect recycling solutions that are highly profitable to maximize the ROI for customers.

ONE-STOP-SHOP, MADE IN THE NETHERLANDS, BUT WITH GLOBAL REACH

Just like its sister company, Bollegraaf Recycling Solutions, Lubo Recycling Solutions has its roots in the Netherlands. From design, sales, engineering, project management, installation & commissioning to after-sales & service, Lubo has everything in-house. This ensures an in-depth knowledge of the equipment and applications.

Lubo is active on a global scale, in close cooperation with Bollegraaf's sales & service offices and with its exclusive distributor in North America, Van Dyk Recycling Solutions. All over the world, Lubo realized turnkey projects with the highest standard and tight deadlines. Installation and commissioning are always carried out by one of our Installation Managers (Supervisors) in close cooperation with partners that have experienced and resourceful teams.

MRF OF THE FUTURE

Innovation is key in all the solutions that Lubo is offering. This comprises mechanical separation, compressed air technology, optical sorting, robotics, and even the integration of artificial intelligence to create self-regulating machines. As the innovator in the recycling industry, Lubo is working on the MRF of the future. Innovation never stops, which means Lubo also does not stop working continuously on and investing in customer demand-driven product improvement and new product development.
