

M Type

Recotherm
INNOVATIVE VENTILATION TECHNOLOGY

Saving energy through efficient technology

Our Engineering Pedigree

Designing the best product for the best price

The Aeris M Type is a controlled 'fresh air' system that keeps the pool hall atmosphere balanced in terms of temperature and humidity. It has been specifically designed as a direct replacement for older or other branded units. It has the same connections and is an easy-fit solution for those who wish to upgrade, with the minimum amount of disruption in the plant room. It can also be flat packed for ease of installation. Many hotels and schools are choosing this unit to upgrade their pool hall ventilation systems.

The M Type's size and capabilities also makes it a great option for a new installation. The M Type enjoys all the features you would associate with the standard Aeris range; high build quality, state of the art controls, a pleasant fresh air environment and technical back up.

Scrollless fans that give greater efficiency controlled by real speed controllers

High efficiency filters to remove particulates

Fresh air intake for dehumidification rather than refrigerant gives fresher feel to the environment

Fully functioning BEMS (building energy management systems) means that it is always operating at its peak performance

Fully modulating heating valves and dampers to ensure that the precise amount of energy is used to maintain the pool hall conditions
