About the Symposium

As the Asia Pacific region enters a new phase of large-scale asset retirement, decommissioning is evolving from an end-of-life obligation into a strategic opportunity. ***Rethinking Decommissioning*** highlights the need for cross-border collaboration, innovative technologies, and sustainable practices to maximise value throughout the asset lifecycle. By fostering partnerships between industry, regulators, governments, and communities, the industry can address regulatory, financial, environmental, and social challenges while enabling asset reuse, circular economy opportunities, cost optimisation, and regional capability building for a more resilient and sustainable energy future.
