The  
transformation  
journey,  
informed by  
experience in  
other industries

Data, data, data - *it all begins with data*

People - *our strength is people*

An approach to innovation -  
*balancing Incremental and  
Disruptive innovation*

# Becoming data-driven...

Data, data, data - *it all begins with data*

People - *our strength is people*

An approach to innovation -  
*balancing Incremental and  
Disruptive innovation*

A modern, open-plan office lounge with people sitting on leather sofas and at tables. The word "we work" is overlaid in large white text. The space features a mix of seating, including leather sofas with patterned blankets and pillows, and tables with orange chairs. The ceiling has exposed ductwork and several spherical pendant lights. In the background, there's a bar area and a chess table. The overall atmosphere is casual and collaborative.

# Data, data, data...

# Key areas we're innovating with data:

- **Fully integrated** our entire system of core tools – website, CRM, Ops manual, e-contracts, mailer system, floor plan tool... everything;
- Developed a **methodology for systematic data collection**, across a number of different mediums where our customers interact, not just with us, but with each other - increasing our understanding of the communities we serve and our competitive landscape;
- **Hyper-segmentation** - leading to increased personalisation of experiences; and
- Increasingly **building self-service tools** to get actionable data outputs, into our team members hands, for current and historical shows without reliance on our data team.

# What is Business Intelligence?

- Business Intelligence (BI) refers to the tools, technologies, applications and practices used to collect, integrate, analyze, and present an organization's raw data in order to create insightful and actionable business information.

BI as a discipline and as a technology-driven process is made up of several related activities, including:

- - Data mining
  - Online analytical processing
  - Querying
  - Reporting

According to an IBM study, 54% of C suite executives in the US expect that competition will come from other industries.

How will your business have  
changed by the year 2030?

---

35 million visitors

300,000 organizers

182 countries

12,000 Meetups per day around the world

Could they disrupt us?

## Disruptive innovation will be a challenge...

- The frequency of our events is not conducive to rapid test-and-learn used in most successful disruptions
- Current people and systems are designed for risk-avoidance and stability

If you want to explore disruptive experiences...

- Focus in niche un-served or underserved areas of a community
- Create a minimum viable product
- Prove the concept
- Expand from there.

If you want to explore disruptive experiences...

- Focus in niche un-served or underserved areas of a community
- Create a minimum viable product
- Prove the concept
- Expand from there.
- Consider creating a new team, or organisation to lead the initiatives

Are we ready to  
disrupt?

We are more routinely discussing options and ideas, however...

- Need to look at building the resources required;
- Find appropriate ways to analysis risk vs. reward; and
- Align on a methodology for identifying what we move forward with.

Peter Cross, Customer Experience Director, John Lewis & Partners said:

“Recent years have seen seismic changes in our sector, with a new benchmark in customer expectation every time they shop. Shops simply have no option but to inspire and delight customers - offering both fantastic products and personalised seamless experiences.”
