ZERO WASTE COFFEE ROASTING

Eco Roast Technology, a multi award winning method of harnessing the abundant energy from used coffee grounds and using it to roast fresh coffee!

Today, we roast all our coffees using Eco Roast Technology, ensuring that every kilo of deliciously responsible coffee roasted is reducing our environmental impact.

Sustainable
Ethical

ZERO WASTE

2020 was spent looking into new ways we could package our coffee without compromising the quality of the coffee or the environmental impact of its end of life.

Our development team suggested expanding a solution we already use internally every day to store our freshly roasted coffee, making it available to our clients to benefit from too.

“Eco Tubs” are durable, food grade plastic tubs that have a degassing valve for fresh coffee.

COFFEE PACKAGING

ECO TUBS

There are numerous advantages to using Eco Tubs in lieu of traditional foil lined bags, including:

Continuously reusable

More durable

Easier to reseal

Easier to carry

Reduction in waste disposal costs

ZERO waste packaging

100% Recyclable at end of life

Improved Corporate Social Responsibility

CARBON NEUTRAL

In 2021 we began the roll out of our coffee delivery/collection scheme. With additions to our in-house delivery routes, we offer to deliver your fresh coffee in 6kg tubs and collect your saved used coffee grounds from the previous delivery at the same time. This not only ensures that the journey is carbon neutral, but it will also save you money in waste disposal costs too.

We collect your tubs of coffee grounds free of charge to bring back and be re-processed into bio- fuel.

ECO ROAST

DELICIOUSLY RESPONSIBLE COFFEE

DELIVERY/COLLECTION

HOW IT WORKS

We deliver your fresh coffee in Eco Tubs in quantities of 6kg together with a reusable Coffee Grounds Tub. You can decant your coffee 'as you need it' and keep it stored in the valved, sturdy Eco Tub. You will then deposit your used coffee grounds into the Collection Tubs - **ZERO WASTE!**

On the day of delivery, our driver will deliver one full tub (6kg) of fresh beans and one empty tub to collect your used grounds in.

When your next tub order is delivered, we will collect both the previous tubs from you and leave you with two new ones, one full of beans and the other empty for the grounds again!

ZERO WASTE

By collecting your used coffee grounds and reprocessing it into bio-fuel it enables us to roast your fresh coffee, which is truly a zero waste, closed loop system

This type of system offers multiple economical, environmental and social benefits to its users.

By engaging with this system, you really are making a tangible difference.

DELICIOUSLY RESPONSIBLE COFFEE

CLOSED LOOP SYSTEM

ZERO WASTE - MULTIPLE BENEFITS

There are numerous benefits to adopting this system.

- IMPROVED CORPORATE SOCIAL RESPONSIBILITY
- LOWERING YOUR WASTE OUTPUT
- REDUCING YOUR CARBON FOOTPRINT
- BECOMING MORE SUSTAINABLE
- BECOMING PART OF A CLOSED LOOP STRATEGY
- COST SAVINGS TO BE MADE
- ADOPTING AN ENVIRONMENTAL BEST PRACTICE
- IMPROVING YOUR CUSTOMER ENGAGEMENT
- BEING ABLE TO MARKET THIS GREAT USP
