

Total Estimating

Bid, Win, Deliver

The leading estimating and takeoff software for MEP contractors

A complete solution for your estimating and project management needs

The Total Estimating packages give you the tools you need to create the most accurate estimates, automate workflows, track project budgets, and facilitate collaboration amongst team members - all in the cloud. By spending less time working on your estimates and takeoffs, you can focus more on bidding and winning more work.

Fully integrated package for estimators and project managers

Total Estimating and Total Estimating+ give you access to the UK's market-leading enterprise solutions for estimating and contract management - win work, and manage contracts and financials for your MEP projects, all in one subscription.

With seamless integrations between modules like LiveCount (for digital takeoff) and Enterprise Estimating, estimators can automatically feed takeoff quantities into estimates, increasing efficiency and reducing the risk of errors compared to manual entries. Additionally, with access to the Luckins database, searching for product information and price data couldn't be easier.

Enjoy flexible access - both packages are **cloud-hosted** giving you the ability to work on your estimates and takeoffs from anywhere with an internet connection, as well as benefiting from simplified access and administration.

One subscription. All the functionality you need to win and manage projects.

What's included in a Total Estimating package

With a variety of modules seamlessly integrated, the power to create accurate estimates and streamline workflows is all yours. A variety of modules integrate with your estimating solution, these include: LiveCount, Contract Costing, Quote Master, Procurement and Contract Management. You'll also receive access to Trimble Connect, and our next-generation software, Estimation MEP.

Win work with Total Estimating

Total Estimating gives you the power to quickly create more accurate electrical and mechanical estimates. With the live link connection between your estimating and digital takeoff solutions, the risk of data entry errors drops, as any changes made to a drawing are instantly updated in the estimate. There are even more time-saving features, such as LiveCount's AutoCount feature, which removes the mundane task of counting quantities and ensures a higher level of accuracy. This bundled with access to the Luckins database, catapults your estimates to a new level of accuracy and speedy completion.

Manage contracts with Total Estimating+

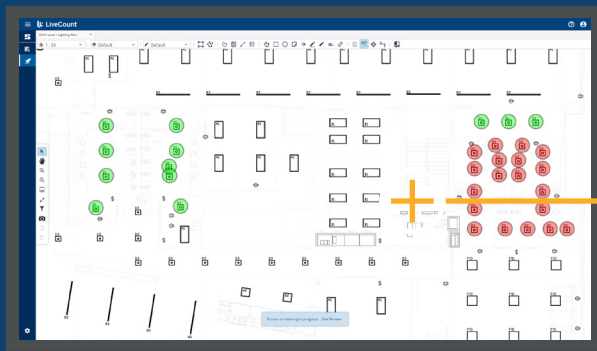

Total Estimating+ gives you the right tools to keep your projects on time and within budget. While a clearly defined project scope and procurement plan set a strong foundation, having the right tools in place to track changes and make an effective buying decision is crucial to success. With Total Estimating+, you will have access to modules such as Procurement, Contract Management, and Contract Costing. Help ensure a successful project by giving project managers the tools to make effective buying decisions, control purchasing, and manage costs from start to finish.

Luckins

With direct access to the Luckins database, you can easily search over one million Electrical, HVAC and Plumbing products by commodity, manufacturer and catalogue number. Confidently select items with the correct material information and list pricing to ensure every estimate you produce is accurate.

A bespoke service:

Luckins data is available in a range of standard databases, but you can also choose a bespoke database tailored to your precise business requirements. A bespoke database may contain suppliers chosen from the central Luckins database, plus additional suppliers if required, sourced on request. In addition, a range of additional services are offered including discount/net price upload, and estimating database management. N.b. This service is in addition to the standard Total Estimating and Total Estimating+ packages.

Access to Trimble's latest and next-generation software

Trimble LiveCount is an intuitive web-based takeoff software that allows you to efficiently and accurately perform digital takeoffs from MEP drawings with a direct link to your estimates.

Trimble Estimation MEP Pro represents the future of estimating software - this easy-to-use, cloud estimating software offers fully integrated graphical takeoff, material pricing and labour, and a continuously expanding set of features.

Trimble Connect Business Premium is a cloud-based collaboration tool that allows you to share project details and files with team members and stakeholders. Trimble Connect

enables better decision-making and increases productivity in all project phases, from the initial design to multi-year facility maintenance.

The benefits of a Total Estimating subscription

A subscription to Total Estimating is flexible and adaptable to your business' needs, and offers several benefits:

- ▶ Access all required estimating and contract management modules via one, easy to manage subscription
- ▶ Easily scale-up licences when needed based on your business requirements
- ▶ Access to Trimble's next-generation estimation software
- ▶ Cloud-hosting for simplified access
- ▶ Trimble manages server infrastructure, maintenance, licences, and updates, thus freeing up your time to focus on winning more projects

Join over 80,000 Trimble MEP estimating users

Users of Trimble MEP's solutions range from small MEP design and contracting companies to large global engineering practices.

Trimble MEP

Trimble MEP delivers sophisticated solutions that transform workflows from the office to the field. The Trimble Constructible Process allows specialty trades to build beyond BIM to automate fabrication and fieldwork with reliable construction data. With access to the largest library of manufacturers content and a broad portfolio of hardware and software solutions, Trimble optimises the entire design, build, and operate lifecycle.
