

Prevent Water Damage

Reduce Insurance Claims with Artificial Intelligence

WINT helps construction companies, property owners, corporations and facility managers **mitigate water leaks and water-related damages, keep claims low and reduce their environmental footprint.**

WINT ensures the continuity of construction projects and prevents expensive downtime by monitoring water use and mitigating leaks.

WINT also enables efficient water use by detecting water waste, cutting water consumption and its associated carbon footprint by 20-25%.

Protect. Prevent. Preserve.
www.wint.ai

WINT's Solution

WINT uses Artificial Intelligence, machine learning, pattern recognition, and signal processing to detect leaks and water use anomalies.

Mitigate Water Leak Damage

WINT detects leaks as they happen, instantly alerts staff and can shut off water supplies to prevent water-leak damage.

Reduce Insurance Cost

WINT reduces water damage risks by preventing claims. Our customers benefit from our optional HSB-backed performance warranty to mitigate the cost of rising water damage deductibles.

Reduce Environmental Footprint

WINT customers typically reduce ongoing consumption and bills by 20-25%.

Reduce Carbon Emissions

WINT reduces the carbon emissions generated by the energy and chemicals associated with water use.

WINT's Key Features:

- » High detection accuracy
- » Remote and automated valve shutoff
- » Backup power in case of power failure
- » Autonomous operation ensuring protection under communication failure
- » Configurable alerts policy settings
- » 24/7 customer support
