

# Southern Africa Energy Storage Standards Workshop

Cape Town, South Africa  
Monday, May 11, 2020

## U.S.-AFRICA CLEAN ENERGY STANDARDS PROGRAM

As the cost of energy storage declines, it is becoming more widely used around the world. If deployed effectively, energy storage can increase the capacity of Southern Africa's electric grid to integrate renewables and improve the efficiency of plants across the sub-region.

This workshop aligns with African Utility Week and PowerGen Africa and will feature presentations by experts on standards-related issues such as safe and efficient energy storage technologies from the U.S. that can benefit countries in Southern Africa. Discussions will also feature an overview of energy storage standards, policies to support an enabling environment, and lithium-ion batteries and other types of battery storage.

**May 11, 2020**  
9:00 am – 5:00 pm  
Westin Hotel  
Cape Town, South Africa

**Registration is required** – to save your seat, please contact [us-africacesp@ansi.org](mailto:us-africacesp@ansi.org) and indicate your name, title, organization, email and phone number. *To receive a discount code for the African Utility Week delegate pass, register before April 30.*

The U.S.-Africa Clean Energy Standards Program is sponsored by the U.S. Trade and Development Agency in partnership with Power Africa and coordinated by the American National Standards Institute. More information is available at [www.standardsportal.org/us-africacesp](http://www.standardsportal.org/us-africacesp).
