

A large background image showing a yellow excavator on the left and a yellow wheel loader on the right, both on a construction site at sunset. The excavator's arm is raised, and the wheel loader's bucket is lowered. The sky is a mix of orange and blue.

VEHICLE TO VEHICLE ALERT

Vehicle Anti-Collision System for
Plant & Industrial Machinery

Reduce the risk of vehicle collisions
using detection and alert safety
technology.

Be confident in the safety of your
worksite. Talk to us today.

HOW DOES IT WORK?

VEHICLE TO VEHICLE ALERT

The ZoneSafe Vehicle to Vehicle Anti-Collision System provides reliable long-range detection to significantly reduce the risk of impacts and collisions between industrial vehicles used in the workplace.

Fitting to any industrial vehicle, the system can be easily configured to provide two warning zones: an outer pre-warning zone (long range) and an inner warning zone (close proximity).

- Reduce impacts and collisions
- Long-range detection
- Fits to any workplace vehicle
- Easy Configuration
- Audible visual alarms
- Proven Technology

ZONESAFE VEHICLE TO VEHICLE (V2V) ALERT COMPONENTS

V2V SENSOR

ZoneSafe vehicle to vehicle sensors can be fitted to any type of industrial vehicle.

Each sensor can be detected up to 50 metres away between vehicles.

Once detected, the sensor signals the ZoneSafe control unit to trigger an audible and visual alarm.

WARNING ZONE

Two warning zones can be set up to provide detection of other vehicles:

- Outer Pre-Warning Zone
- Inner Warning Zone

The outer pre-warning zone detects vehicles in the distance whilst the inner warning zone detects vehicles in close proximity.

CONTROL UNIT

The in-cab control unit is located next to the driver offering easy access.

When the V2V sensor detects another vehicle, an audible visual alarm from the control unit warns the driver.

Different alarm sounds indicate whether the detected vehicle is in the inner or outer warning zone.

SYSTEM CONFIGURATION

Connecting via a web-enabled device (such as a mobile phone) allows you to easily configure detection ranges, alarm volume and alarm sounds.

PLEASE NOTE

ZoneSafe safety solutions are compatible with each other providing you with the ability to add layers of safety to suit your worksite needs.
