

EXPERT SERVICE

Our experienced team will lead you through the process from start to finish, ensuring a seamless transition from steel extinguishers to P50 Extinguishers. For larger, more complex premises, or multi-site organisations, a phased approach can be provided, tailored to your current extinguisher servicing and replacement dates.

- Free site survey, if required
- Free cost and carbon saving analysis
- Free installation, signage and wall brackets
- Staff training provided for the simple visual inspection
- Removal and recycling of old extinguishers
- No hidden costs

experienced &
dedicated
team

“East Midlands Airport has significantly reduced its carbon footprint and achieved substantial cost savings over the next decade by switching to P50 Service-Free Extinguishers. With expert guidance from the Safelincs team, we seamlessly transitioned from steel fire points to P50s, enhancing our corporate social responsibility and operational efficiency across the entire airport site.”

P50 Service-Free Fire Extinguishers

Safelincs[®]
Fire & Safety Solutions

P50 Service-Free Fire Extinguishers have a unique construction and offer a **sustainable alternative to traditional steel fire extinguishers**. They have a number of benefits over their steel counterparts, including a much longer lifespan and no requirement for an annual service by a trained technician.

HALF THE COST.

By installing P50 Extinguishers, our customers often see a 50% reduction in their extinguisher costs over 10 years when compared to their existing steel extinguishers.

- No need for annual servicing from a contractor
- Versatile, high-performance media can usually reduce number of units on site by around 50% without impacting coverage
- 10 year warranty
- Long life when compared to steel extinguishers

HALF THE CARBON.

Made in the UK using a low-carbon production process, P50 Extinguishers are leading the way in sustainable fire fighting. Switching to P50 Extinguishers can help your organisation reduce their carbon footprint by half when compared to steel extinguishers.

- Manufactured in Norfolk using solar energy
- Low-carbon production process
- 100% recyclable
- Lifespan is twice as long as steel extinguishers
- Potential to reduce the number of extinguishers
- Choice of PFAS-free eco-friendly media
- No miles travelled by external servicing contractors
